Age vs Charges

Key Insights

BMI is the biggest cost driver: People in the **Obese BMI category** pay much higher insurance charges than those with **Normal BMI**.

Age group has a strong impact on costs: The **Older age group** pays much more than **Youth**, with charges rising sharply after age 40.

Children increase insurance charges: Costs go up significantly as the **number of children** increases.

Smoking status shows only a small difference in average insurance charges in this dataset.

Region has very little impact on insurance charges compared to BMI and Age group.

Overall, **BMI and Age group** affect insurance charges more than **Smoking status or Region**.
